Analytical Method: Available on request
Appearance: Blended crystalline powder
Solubility in water: Fully soluble in water

Directions for use

Application rates: 0.5 – 2.0 grams per litre. Normally 1 gram per litre if no controlled release fertilizer (CRF) e.g. Solucote is used in the potting compost and 0.5 grams per litre if a reduced rate of CRF is used.

Directions: The normal method is to make a 10% concentrated fertilizer stock tank solution (10 kg in 100 litres of water) which is then further diluted into the irrigation water with a dosing pump at the rate of 1:100 to give 1 gram per litre final dilution (or adjust pump to give desired rate)
